Audit

<u>Memo</u>

To: Ricardo Water Supply Corporation Board of Directors

From: John Marez, General Manager

Date: August 21, 2025

Subject: Acceptance of Fiscal Year 2024 Audit

Background:

The Ricardo Water Supply Corporation (RWSC) is organized under Article 1434a of the Revised Civil Statutes of Texas of 1925. In accordance with generally accepted accounting principles (GAAP) and recommendations from the Texas Commission on Environmental Quality (TCEQ), RWSC conducts an annual financial audit. This process ensures transparency, accountability, and accurate financial reporting to our members, regulators, and stakeholders.

For Fiscal Year 2024, the audit was performed by John Womack & Co., Certified Public Accountants, based in Kingsville, Texas.

Analysis:

The Fiscal Year 2024 Audit has been completed and reviewed by management. The audit process examined RWSC's financial statements, internal controls, and compliance with applicable accounting standards.

Key points from the audit:

- The auditors provided an independent review in accordance with GAAP.
- No material deficits or irregularities were reported.
- The financial statements fairly represent the financial position of RWSC as of the close of Fiscal Year 2024.

Acceptance of this audit is consistent with industry best practices and fulfills recommendations for public water systems.

Staff Recommendation:

Staff recommends the Board formally accept the Fiscal Year 2024 Audit as prepared by John Womack & Co.

Board Action:

Motion to adopt Resolution 25-02, accepting the Fiscal Year 2024 Audit prepared by John Womack & Co.

Summary:

The Fiscal Year 2024 Audit (January 1, 2024 - December 31, 2024) has been completed without findings of concern and meets the standards required for public water systems. Acceptance of the audit by Board resolution ensures compliance with GAAP and TCEQ best practices, while maintaining RWSC's commitment to financial integrity and transparency.

INDEPENDENT AUDITOR'S REPORT

Board of Directors Ricardo Water Supply Corporation 2302 E. Sage Road Kingsville, Texas 78363

Opinion

We have audited the accompanying financial statements of Ricardo Water Supply Corporation (a nonprofit organization), which comprise the statement of net position as of December 31, 2024 and 2023, and the related statements of activities and cash flows for the years then ended, and the related notes to the financial statements.

In our opinion, the financial statements referred to above present fairly, in all material respects, the financial position of Ricardo Water Supply Corporation as of December 31, 2024 and 2023, and the changes in net position and cash flows for the years then ended in accordance with accounting principles generally accepted in the United States of America.

Basis for Opinion

We conducted our audit in accordance with auditing standards generally accepted in the United States of America. Our responsibilities under those standards are further described in the Auditors' Responsibilities for the Audit of the Financial Statements section of our report. We are required to be independent of the Ricardo Water Supply Corporation and to meet our other ethical responsibilities in accordance with the relevant ethical requirements relating to our audit. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

Other Matters

Our audit was conducted for the purpose of forming an opinion on the financial statements as a whole. The accompanying supplemental information as listed in the table of contents is presented for purposes of additional analysis rather than to present the results of operations of the Ricardo Water Supply Corporation, and are not a required part of the financial statements. Such information is the responsibility of management and was derived from and relates directly to the underlying accounting and other records used to prepare the financial statements. The information has been subjected to the auditing procedures applied in the audit of the financial statements and certain additional procedures, including comparing and reconciling such information directly to the underlying accounting and other records used to prepare the financial statements or to the financial statements themselves, and other additional procedures in accordance with auditing standards generally accepted in the United States of America. In our opinion, the information is fairly stated, in all material respects, in relation to the financial statements as a whole.

Responsibilities of Management for the Financial Statements

Management is responsible for the preparation and fair presentation of these financial statements in accordance with accounting principles generally accepted in the United States of America, and for the design, implementation, and maintenance of internal control relevant to the preparation and fair presentation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, management is required to evaluate whether there are conditions or events, considered in the aggregate, that raise substantial doubt about Ricardo Water Supply Corporation's ability to continue as a going concern within one year after the date of the financial statements are available to be issued.

Auditors' Responsibilities for the Audit of the Financial Statements

Our objectives are to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditors' report that includes our opinion. Reasonable assurance is a high level of assurance but is not absolute assurance and therefore is not a guarantee that an audit conducted in accordance with generally accepted auditing standards will always detect a material misstatement when it exists. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control. Misstatements, including omissions, are considered material if there is a substantial likelihood that, individually or in the aggregate, they would influence the judgmenet made by a reasonable user based on the financial statements.

In performing an audit in accordance with generally accepted auditing standards, we:

- Exercise professional judgement and maintain professional skepticism throughout the audit.
- Identify and assess the risks of material misstatement of the financial statements, whether due to fraud or error, and design and perform audit procedures responsive to those risks. Such procedures include examining, on a test basis, evidence regarding the amounts and disclosures in the financial statements.
- Obtain an understanding of internal control relevant to the audit in order to design audit procedures
 that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the
 effectiveness of the Ricardo Water Supply Corporation's internal control. Accordingly, no such
 opinion is expressed.
- Evaluate the appropriateness of accounting policies used and the reasonableness of significant accounting estimates made by management, as well as evaluate the overall presentation of the financial statements.
- Conclude whether, in our judgement, there are conditions or events, considered in the aggregate, that raise substantial doubt about the Ricardo Water Supply Corporation's ability to continue as a going concern for a reasonable period of time.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

Respectfully submitted.

John Womack and Company, P.C.

lomack & Co., P.C.

Kingsville, Texas June 20, 2025

NOTES TO THE FINANCIAL STATEMENTS YEAR ENDED DECEMBER 31, 2024

A. Nature of Operations and Summary of Significant Accounting Policies

The Ricardo Water Supply Corporation (the Corporation) is a member-owned non-profit corporation incorporated September 18, 1964, pursuant to the provisions of the Texas Revised Annotated, Article 1434A as supplemented by the Texas Non-Profit Corporation Act, Texas Revised Civil Statutes Annotated, Article 1396, for the purpose of furnishing a potable water utility service. Corporation operating policies, rates, tariif, and regulations are formulated and effected by a seven-member board of directors elected by members of the Corporation. All profits arising from the operation of such business shall be paid out annually to persons who have, during the past year, transacted business with the Corporation, in direct proportion to the amount of business transacted. No such dividends shall be paid while any indebtedness of the Corporation remains unpaid, and provided also that the Directors of the Corporation may allocate to a reserve fund such amounts of the annual income as they deem necessary for maintenance, upkeep, operation and replacements, emergency repairs, and for deficiencies in income necessary to meet debt service costs. For financial statement purposes, the accounting records are maintained on the accrual basis of accounting.

Articles of Incorporation

The Articles of Incorporation were adopted on September 18, 1964, which establishes the make-up of the Board of Directors, provides for annual and regular meetings, and other important regulations of the water system.

Bv-Laws

The Corporation has adopted a set of by-laws which describes the duties of the officers of the Board, provisions for maintaining funds, definition of the fiscal year, and the rights of the membership.

Accounting Policies

(1) Basis of Accounting

The accompanying financial statements have been prepared on the accrual basis of accounting in accordance with generally accepted accounting principles.

(2) Cash and Cash Equivalents

Cash and cash equivalents, in the accompanying balance sheet, includes amounts in demand deposits as well as debt securities with a maturity date of within ninety days of the date of purchase. Management considers investments in public funds investment pools to be cash equivalents due to their high liquidity.

(3) Accounts Receivable

Accounts receivables are stated at the amount management expects to collect from outside balances. Balances that are still outstanding after management has used reasonable collection efforts are written off through a charge to bad debt and a credit to the applicable accounts receivable.

(4) Inventory

Inventory is valued at the lower of cost (first-in, first-out) or market. Inventory consists of expendable supplies held for consumption. The cost is recorded as an expenditure at the time individual inventory items are used.

(5) Memberships/Contributed Capital

Monies pald in as memberships are reflected as membership deposits, since they are refundable when service is terminated. Tap and contributed capital fees, which are collected when each member joins, are recorded at that time as contributed capital, since they are not refundable once service is provided.

NOTES TO THE FINANCIAL STATEMENTS YEAR ENDED DECEMBER 31, 2024

(6) Utility Plant

The cost of additions to utility plant and their renewals and betterments are capitalized. The Corporation will capitalize those costs greater than or equal to \$1,000. For financial statement purposes, the Corporation provides for depreciation by use of the straight line method. The rates are intended to distribute the cost of depreciable properties over their estimated useful lives. Maintenance repairs and renewals which neither materially add to the value of property nor appreciably prolong its life are charged to expenses as incurred. Gains or losses on disposition of property and equipment are included in the Statement of Revenues, Expenses, and Changes in Retained Earnings. The cost of capitalized assets are stated at cost or fair market value if contributed. Estimated useful lives are as follows:

Transmission Lines 5 to 40 years
Engineering 40 years
Operating Equipment 20 years
Office Equipment 5 years

Impalment losses related to capital assets are recognized and measured when there has been a significant, unexpected decline in the service utility of capital assets. The events or changes in circumstances which lead to impairment determinations are not considered to be normal or ordinary. The service utility of a capital asset is the usable capacity which, at acquisition, was expected to be used or provide service. Common indicators of impairment include - evidence of physical damage where the level of damage is such that restoration efforts are needed to restore service utility; enactment of laws or approval of regulations as well as changes in environmental factors; technological developments, or other evidence of obsolescence; changes in the manner or duration of use of capital assets; or construction stoppage due to lack of funding. There were no impairment charges during fiscal year 2024 nor during fiscal year 2023.

(7) Estimates

Preparation of the financial statements in conformity with generally accepted accounting principles requires the use of management's estimates.

B. Cash and Cash Equivalents

Cash accounts included in the linancial statements are maintained at institutions which are covered by the Federal Deposit Insurance Corporation. The depository bank deposits for safekeeping and trust with the Ricardo Water Supply Corporation's agent bank pledged securities in the amount sufficient to protect its funds on a day-to-day basis. The piedge of securities is waived only to the extent of the depository bank's dollar amount of FDIC insurance. Ricardo Water Supply Corporation's cash deposits at December 31, 2024 and 2023, were entirely covered by FDIC insurance or by collateral held by their agent bank. At December 31, 2024, cash equivalents not included in the above depository contract include \$1,277,183 in Texpool. These funds are highly liquid pooled investments and market value closely approximates cost. At December 31, 2023, these amounts included \$953,188 in Texpool.

Public funds investment pools in Texas (Pools) are established under the authority of the Interlocal Cooperation Act, Chapter 79 of the Texas Government Code, and are subject to the provisions of the Public Funds Investment Act (the "Act")Chapter 2256 of the Texas Government Code. In addition to other provisions of the Act designed to promote liquidity and safety of principal, the Act requires Pools to: 1) have an advisory board composed of participants in the pool and other persons who do not have a business relationship with the pool and are qualified to advise the pool; 2) maintain a continuous rating of no lower than AAA or AAA-m or an equivalent rating by at least one nationally recognized rating service; and 3) maintain the market value of its underlying investment portfolio within one half of one percent of the value of its shares.

NOTES TO THE FINANCIAL STATEMENTS YEAR ENDED DECEMBER 31, 2024

The Corporation's Investments in Pools are reported at an amount determined by the fair value per share of the Pool's underlying portfolio, unless the Pool is 2a7-like, in which case they are reported at share value. A 2a7-like Pool is one which is not registered with the Securities and Exchange Commission (SEC) as an investment company, but nevertheless has a policy that it will, and does, operate in a manner consistent with the SEC's Rule 2a7 of the investment Company Act of 1940.

TexPool

The Corporation has invested approximately 90% of its cash with TexPool. Pursuant to subchapter G of chapter 404 of the Interlocal Cooperation Act (the "Act"), the Comptroller of Public Accounts (the "Comptroller") administers the Texas Local Government investment Pools (the "TexPool Portfolios") as public funds investment pools through the Texas Safekeeping Trust Company (the "Trust Company"). The Comptroller and the Trust Company have contracted with Federated investors, Inc. ("Federated"), as administrator and investment manager for the TexPool Portfolios.

The purpose of TexPool is to offer a safe, efficient, and liquid investment alternative to local governments in the State of Texas. As required by the Act, the investment objectives of TexPool in order of priority are 1) preservation and safety of principal, 2) liquidity, and 3) yield. Principal is protected and market and credit risks minimized by investing in a diversified pool of assets of high credit quality. Actual risks are minimized by adequate collateralization and use of delivery versus payment procedures.

Texpool has the following authorized investments -

- Obligations of the United States, its agencies, or instrumentalities with a maximum final stated maturity limited to 297 days for fixed rate securities and 24 months for variable rate notes.
- 2. Fully collateralized repurchase agreements or reverse repurchase agreements (i) with defined termination dates, (ii) secured by obligations of the United States, its agencies, or its instrumentalities, including certain mortgage backed securities, (iii) that require purchased securities to be pledged to the investing entity, in the entity's name, and deposited at the time of investment with the investing entity or a third party, and (iv) that are placed through primary government securities dealers, as defined by the Federal Reserve, or a financial institution doing business in the State of Texas.
- 3. No-load money market mutual fund that (i) is registered with and regulated by the Securities and Exchange Commission, (ii) provides a prospectus and other information required by the Securities Exchange Act of 1934 or the investment Company Act of 1940, (iii) maintains a dollar-weighted average stated maturity of 90 days or fewer, and (v) includes in its investment objectives the maintenance of a stable net asset value of \$1.00 for each share.
- TexPool may engage in a securities lending program that complies with the following:
 - a. the value of the securities loaned, including accrued interest, must be fully collateralized by (i) government securities, (ii) Irrevocable letters of credit issued by a bank organized under U.S. or state law and continuously rated at least A or its equivalent by at least one NRSRO, or (iii) cash invested in government securities, commercial paper, mutual funds, or investment pools authorized by the Act;
 - b. the loan must be terminable at any time;
 - the loan terms must require that the collateral be pledged to the investing entity, held in its name, and deposited with the investing entity or a third party selected and approved by the investing entity;
 - d. the loan must be placed through primary dealers or financial Institutions doing business in the State; and
 - e. the loan agreement must have a term of one year or less.

NOTES TO THE FINANCIAL STATEMENTS YEAR ENDED DECEMBER 31, 2024

As required by section 2256,009 of the Act, TexPool cannot invest in the following:

- Obligations whose payment represents the coupon payments on the outstanding principal balance of the underlying mortgage-backed security collateral and pays no principal;
- Obligations whose payment represents the principal stream of cash flow from the underlying mortgage-backed security collateral and bears no interest:
- 3. Collateralized mortgage obligations that have a stated final maturity date of greater than 10 years; and
- Collateralized mortgage obligations that the interest rate of which is determined by an index that adjusts opposite to the changes in a market index.

In addition, TexPool will not invest in derivatives, commercial paper, or certificates of deposit. Diversification limitations govern investments and are applied at the date of purchase.

- * Up to 100% of TexPool assets may be invested in government obligations of the United States, its agencies, or instrumentalities. However, no more than 60% of the portfolio may be invested in variable rate notes.
- * Up to 100% of TexPool assets may be invested in repurchase agreements. No more than 25% of TexPool assets may be invested in term repurchase agreements and no more than 5% of TexPool assets may be invested in term repurchase agreements with maturities exceeding 90 days.
- Up to 15% of the TexPool assets may be invested in approved money market funds. No more than 10% of TexPool assets may be invested in a single mutual fund.

Credit Risk: Credit risk is the possibility that the issuer of a security will fall to make timely payments of interest or principal. In general, the lower the credit quality of a security, the higher the yield, all other factors being equal. To minimize credit risk, TexPool's investment policy allows the portfolio's investment manager, Federated, to only invest in obligations of the U.S. Government, its agencies, and instrumentalities; repurchase agreements; no-load AAAm money market mutual funds registered with the Securities and Exchange Commission; and securities lending programs.

The credit risk associated with investments in direct obligations of the United States is low. Obligations issued or guaranteed by Federal agencies of government-sponsored enterprises are not direct obligations of the United States and offer more varied credit risk. Because the United States Government is not obligated to provide support to its instrumentalities, TexPool's investment manager will invest in obligations issued by an agency or instrumentality only after analysis that credit risk with respect to the issuer is minimal.

TexPool's investment manager will also invest in repurchase agreements and reverse repurchase agreements which are documented through the use of a Bond Market Association, formerly the Public Securities Association, approved Master Repurchase Agreement and collateralized by obligations of the United States, its agencies, instrumentalities or other obligations on which the principal and interest are unconditionally guaranteed or insured by the United States. Repurchase agreements and reverse repurchase agreement transactions will only be placed with primary government securities dealers or financial institutions doing business in the State of Texas, and proceeds received under reverse repurchase agreements will be reinvested in securities with the same maturity as the term of the reverse agreement.

Market Risk: Market risk is the potential for a decline in market value due to rising interest rates. For example, a bond or other security issued or backed by the United States Government is guaranteed only as to the timely payment of interest and principal; its market price is not guaranteed and will fluctuate in value as interest rates change. In general, the market value of a bond varies inversely with interest rates. If interest rates rise, then market values fall. If interest rates fall, then market values rise. Also, values typically fluctuate more for longer-term securities than for shorter-term securities.

NOTES TO THE FINANCIAL STATEMENTS YEAR ENDED DECEMBER 31, 2024

TexPool's portfolio has low market risk due to restrictions on weighted average maturity and maximum maturity of any one investment. TexPool's investment manager will maintain the weighted average maturity of the portfolio at 60 days or less, no fixed rate security will exceed 297 days in maturity, and no variable rate note will exceed 24 months in maturity. Federated is required to maintain a stable \$1.00 net asset value and must take immediate action if the net asset value of the portfolio falls below \$0.995 or rises above \$1.005. These limitations are designed to minimize market risk.

C. Utility Plant in Service

At December 31, 2024 and 2023, Utility Plant in Service is as follows:

| | 2024 | 2023 |
|--------------------------------|---------------------|---------------------|
| Land | \$ 211,860 | \$ 211,860 |
| Distribution lines & equipment | 7,485,321 | 7,383,350 |
| Engineering | 431,731 | 431,731 |
| Furniture & fixtures | 60,468 | 60,468 |
| Construction in Progress | | |
| Total Utility Plant in Service | 8,189,380 | 8,087,409 |
| Less: Accumulated depreciation | (3,862,964) | (3,624,233) |
| Net Utility Plant in Service | \$ <u>4.326.416</u> | \$ <u>4,463,176</u> |

The Corporation acquires title to water lines in return for agreeing to their maintenance whenever a subdivision enters the Corporation. The cost of these lines are paid by the subdivision to the Corporation as a reimbursement of cost paid by the Corporation. The Corporation then records it as an addition to fixed assets and an increase in contributed capital.

D. Income Taxes

The Corporation has been exempted from federal income taxes as a nonprofit corporation under Section 501(c)(12), and, accordingly, the financial statements do not reflect a provision for income taxes.

The Corporation adopted the provisions of FASB ASC 740-10-25, "income Taxes - Overall - Recognition", which requires recognition and disclosure of uncertain tax positions in the financial statements and footnotes. Management has analyzed the Corporation's tax positions taken with respect to all applicable income tax issues for open tax years (2021 through 2024), and has concluded that it has appropriate support for any tax positions taken or expected to be taken and, as such, does not have any uncertain tax positions that are material to the financial statements.

E. Long Term Debt

Long-term debt consists of the following:

| | Balance 12/31/23 | Increases | Decreases | Balance 12/31/24 | Current Portion |
|-----------------------|-------------------------|-----------|-------------|---------------------|--------------------|
| USDA Promissory Notes | \$ <u>1,941,266</u> \$_ | | \$39,390_\$ | 1,901,876 \$ | 40,683 |

NOTES TO THE FINANCIAL STATEMENTS YEAR ENDED DECEMBER 31, 2024

| | | 2024 | | 2023 |
|--|----|-----------------------|-------------|-----------------------|
| \$1,969,000 Promissory Note to USDA for construction of a 12 inch water transmission line and a 150,000 gallon storage tank on CR 2170, payable over 40 years with interest only for the first year at 3.5% and monthly payments of \$7719 thereafter, including interest at 3.5%, projected payoff date in December, 2052, secured by pledge of revenues of the Corporation | \$ | 1,651,226 | \$ | 1,685,429 |
| \$299,000 Promissory Note to USDA for construction of a 12 inch water transmission line and a 150,000 gallon storage tank on CR 2170, payable over 40 years with interest only for the first year at 3.5% and monthly payments of \$1173 thereafter, including interest at 3.5%, projected payoff date in December, 2052, secured by piedge of revenues | | | | |
| of the Corporation | - | 250,650 | | 255,837 |
| | | 1,901,876 | | 1,941,266 |
| Less current portion | \$ | (40,683) 1,861,193 | \$ | (39,390) 1,901,876 |

The annual requirements to amortize the debt outstanding at December 31, 2024, is as follows:

| Year Ending | | | | | |
|--------------|--------------------|------------|------------|------------|-----------|
| December 31, | Principal | Interest | Principal | Interest | Total |

F. Management

(1) Certificate of Convenience and Necessity

Certificate of Convenience and Necessity (No. 11889) was awarded to the Ricardo Water Supply Corporation by the Texas Utility Commission of Texas as requested in Docket No. 6237 on September 12, 1985.

(2) Management Contract

On January 28, 1991, the Corporation entered into a management contract with the South Texas Water Authority for management and operations of its system. The contract provides for insurance and bonding, reporting, and management's procedures and responsibilities.

NOTES TO THE FINANCIAL STATEMENTS YEAR ENDED DECEMBER 31, 2024

(3) Accounting and Billing

During the 1991 year, the billing and accounting functions were outsourced to the South Texas Water Authority in order to help expedite these duties. This has allowed for more timely and consistent data to be available.

The Corporation remits funds to the South Texas Water Authority for the performance of various services including administration, water purchases, repairs and maintenance costs. For the twelve month periods ended December 31, 2024 and 2023, amounts paid to the South Texas Water Authority for these services totaled \$712,102 and \$677,892, respectively, in the following categories:

| | 2024 | 2023 | | |
|-------------------------|-------------------|------------|--|--|
| Administration | \$ 140,408 | \$ 150,316 | | |
| Operation | 114,808 | 91,665 | | |
| Water purchases | 377,661 | 348,978 | | |
| Repairs and maintenance | 79,225 | 86,933 | | |
| Total | \$ <u>712.102</u> | \$677,892 | | |

G. Concentration of Risk

All customers of Ricardo Water Supply Corporation are located in Kleberg County, Texas. At December 31, 2024 and 2023, there were 1,124 and 1,111 customers on line, respectively, none of which individually represent a significant portion of revenue or receivables.

The South Texas Water Authority provided 100% of all water obtained by Ricardo Water Supply Corporation for sale to its customers via a 12 inch transmission line that was placed in service December 12, 2013. The Corporation's water purchase contract with South Texas Water Authority was approved in August, 2015, effective on that date for twenty years.

H. Contracted Discount on Water Sales

A major customer of the Corporation has a fifty-cent per 1,000 gallon discount contract, in exchange for a contributed capital contribution to the Corporation made in 1987 of \$189,000.

The discount is applicable only until such time the original \$189,000 is paid back to the customer or until the customer ceases business operations. There is no financial obligation to the Corporation other than to sell water at a fifty-cent discount. As of December 31, 2024, a future discount of \$97,837 still remains on the contract or 197,674 thousands of gallons of water. In 2024, the customer used 115,280 gallons of water for a total discount of \$58; in 2023 it was 140,780 gallons and \$70 discount.

I. Subsequent Events

Management has reviewed subsequent events and transactions that occurred after the balance sheet date through June 20, 2025, which is the date of the audit report. The financial statements include all Type I events or transactions, including estimates, required to be recognized in accordance with generally accepted accounting principles. Management and those charged with governance have determined that there are no non-recognized Type II subsequent events that require additional disclosure.

J. Budgets

A budget is prepared using the accrual basis of accounting. The budget is approved by the Board of Directors, and used as a management tool and as a basis in determining the price of water charged to member users of the Corporation.

Resolution 25-02

RICARDO WATER SUPPLY CORPORATION

Resolution 25-02

A RESOLUTION ACCEPTING THE FISCAL YEAR 2024 AUDIT PREPARED BY JOHN WOMACK & CO., P.C. OF KINGSVILLE, TEXAS.

WHEREAS, the Ricardo Water Supply Corporation is a functioning Water Supply Corporation organized under Article 1434a of the Revised Civil Statutes of Texas of 1925, and

WHEREAS, an annual audit is part of generally accepted accounting principles and is highly recommended by the Texas Commission on Environmental Quality, and

WHEREAS, the Corporation has received and reviewed the Fiscal Year 2024 Audit.

NOW, THEREFORE, BE IT RESOLVED that the Ricardo Water Supply Corporation accepts the Fiscal Year 2024 audit prepared by John Womack & Co., P.C. of Kingsville, Texas.

Duly adopted this 26th day of August, 2025.

A motion was made by Mr. Escobedo and seconded by Mr. Garza to approve the Treasurer's Reports and payment of the bills. The motion carried.

6. Appointment of Credentials Committee.

Ms. Jones made a motion to appoint Mr. Hinojosa, Mr. Escobedo and Mr. Robert Wagner to the Credentials Committee. Mr. Hinojosa seconded and all voted in favor.

7. RWSC Master Plan and TWDB Funding.

- Presentation
- Update on bid process for Pump Station Improvement Projects

Mr. Ivan Luna of International Consulting Engineers (I.C.E.) gave a brief presentation on the Master Plan. He emphasized that the Master Plan is a very powerful tool in securing funding from the Texas Water Development Board. The original Master Plan requires updating since it was composed in 2023 and will be adjusted based on population growth and water demand projections as well as for inclusion of State Water Plan Projects which includes a brackish desalination project in Driscoll and a well water project in Ricardo. Mr. Luna said he expects a 95% draft to be available soon and will forward it to the Board for questions and comments. He added that a 3% cost increase is expected and I.C.E. will respond to the Board's direction. Mr. Garcia stated that his focus is on RWSC projects and he will provide questions after reviewing the 95% draft. He also stated that he was contacted by the Ricardo School superintendent who is interested in having the Yellowjacket logo placed on the water tower at Pump Station #1. Mr. Luna also reviewed the process for locating and permitting a well. No action was taken by the Board.

8. Amended RWSC Water Conservation and Drought Contingency Plan.

Mr. Marez presented an updated Water Conservation and Drought Contingency Plan for the Board's consideration. He explained the City of Corpus Christi made changes to their plan therefore RWSC's plan was modified to reflect the same changes. He explained that the stages now include Water Shortage Stage, Stage 1-Mild Water Shortage, Stage 2-Moderate Water Shortage, Stage 3-Critical Water Shortage and Water Emergency Stage Levels 1 and 2. South Texas Water Authority and Nueces Water Supply Corporation have approved updated plans.

9. Resolution 25-03. Resolution adopting the Amended Ricardo Water Supply Corporation Water Conservation and Drought Contingency Plan.

Mr. Hinojosa made a motion to approve Resolution 25-03 adopting the Amended Ricardo Water Supply Corporation Water Conservation and Drought Contingency Plan. Mr. Fischer seconded and all voted in favor.

10. Water Supply and Development Contract with Tiffee Holding Company, LLC./William Charlie Tiffee, Developer, for the Brooklyn Estates Subdivision.

Mr. Marez presented the Water Supply and Development Contract with Tiffee Holding Company, LLC./William Charlie Tiffee for the development of the Brooklyn Estates Subdivision. He reported that Mr. Tiffee has met the Kleberg County subdivision requirements and has paid the pro rata share of the improvements to the corporation's water system to service the subdivision. The development is at the intersection of CR 2180 and CR 1060 and will service 17 connections.

RWSC Regular Meeting Minutes April 8, 2025 Page 4

11. Resolution 25-04. Resolution authorizing the Ricardo Water Supply Corporation
President to enter into a Water Supply and Development Contract with Tiffee Holding
Company, LLC./William Charlie Tiffee, Developer, for the Brooklyn Estates Subdivision.

Mr. Escobedo made a motion to approve Resolution 25-04 and Ms. Jones seconded. The motion passed by unanimous vote.

12. General Manager's Report.

Mr. Marez reported that South Texas Water Authority will be interviewing applicants for the Finance Manager position on April 15th. He had nothing further to report.

13. Adjournment.

With no further business to discuss, Mr. Escobedo made a motion to adjourn the meeting at 6:48 p.m. Ms. Jones seconded and the motion carried.

Respectfully submitted,

Frances De Leon Assistant Secretary

RWSC Master Plan

Memo

To: Ricardo Water Supply Corporation Board of Directors

From: John Marez, General Manager

Date: August 21, 2025

Re: Engineering Feasibility Report (EFR) Overview - TWDB Funded Pump Station Improvements

Background:

The South Texas Water Authority (STWA) serves as a wholesale water provider for several communities in central Kleberg and western Nueces Counties. STWA provides service to over 49,000 residents (within 7 wholesale customers, equaling approximately 14,761 connections), making it the third-largest wholesale water provider in the region. In October 2024, STWA secured \$7,737,207 in Drinking Water State Revolving Funds (DWSRF) from the Texas Water Development Board (TWDB) to rehabilitate five aging pump stations in our service area for both the Ricardo WSC and Nueces WSC.

Recently Board President Garcia met with ICE Engineers to begin plans for the new RWSC Pump Stations 1, 2, & 3.

Analysis:

To support continued growth and ensure long-term system reliability, STWA initiated an Engineering Feasibility Report (EFR) that follows a seven-step methodology:

- Asset Evaluation & Rehabilitation Planning
- 2. System Limitation Assessment
- 3. Future Demand & Growth Analysis (20-year horizon)
- 4. Proposed Engineering Solutions
- 5. Hydraulic & Hydrologic Modeling
- 6. Final Engineering Design
- 7. Alternative Analysis & Economic Feasibility

These steps were applied to assess and prioritize infrastructure needs in five pump stations:

- Central Pump Station/FM 2826 (Nueces County)
- Bishop East Pump Station (Nueces County)
- Ricardo Pump Stations #1, #2, and #3 (Kleberg County)

These locations were selected based on the 2023 STWA/RWSC/NWSC Master Plan and in consultation with International Consulting Engineers (ICE) and the Water Finance Exchange (WFX). Many of the targeted stations are between 40 to 60 years old and require significant upgrades to address regulatory concerns, meet increased demand, and modernize infrastructure for sustainability over the next 20 to 50 years.

STWA's system currently depends on a "true-up" agreement with Corpus Christi Water through the O.N. Stevens Water Treatment Plant for up to 1.43 million gallons per day (MGD), which includes end of year reconciliation of water payments versus actual cost to ensure STWA only pays what is necessary and then passes on that cost to it's wholesale customers including RWSC. To ensure future resilience, this project aligns with STWA's strategy to diversify water sources and reduce system vulnerabilities for it's wholesale customers.

Staff Recommendation:

Staff recommends that the Board continue to support the execution of the rehabilitation plan outlined in the EFR. This includes addressing known shortages, increasing pump station capacity, modifying pipelines, and enhancing storage infrastructure. Staff will maintain regular updates to the Board as we progress through final design and bid phases for the five sites.

Board Action:

No formal action is required at this time. This update is informational and intended to confirm the Board's understanding of the EFR and the TWDB-funded infrastructure upgrades. Board members are encouraged to provide feedback or request additional clarification as needed.

Summary:

STWA is implementing a strategic infrastructure improvement plan supported by over \$7.7 million in TWDB funding. Targeting five aging pump stations, this initiative is part of a larger effort to enhance system reliability, accommodate projected growth, and improve regulatory compliance. The EFR provides a roadmap for these improvements, and the Board will be kept informed throughout each phase of the process.

5.3 - PFS: Ricardo Pump Station #1 - RWSC

The City of Ricardo operates three pumping stations to serve its entire population, although some residents still rely on private water wells to meet their water needs. Pump Stations #1 and #2 were originally constructed in the early 1980s and sourced water from local wells. However, these wells were eventually decommissioned due to issues with water quality and low yield. Subsequently, RWSC entered into a contract with STWA to provide a reliable water supply. Ricardo Pump Station #1 remains one of the primary distribution facilities in the city.

5.3.2- Existing Pump Room Design - Ricardo PS #1

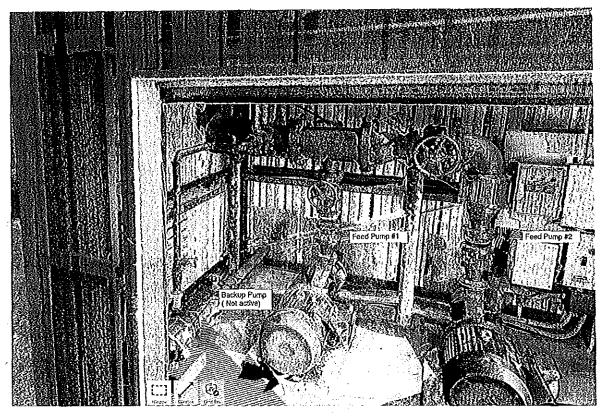

Figure 26. Internal View of the Ricardo pump station #1 pump room – Pump Connection Layout from ICE Survey 3D Scan, June 2025.

- Pump Sequencing (Lead-Lag) 1D+1S
 - Pump #1 (Lead) runs under normal demand
 - If demand increases, Pump #2(Lag) auto starts
 - Alternation Logic: rotates lead pump daily
 - Sizing Logic: Peak hour flow is designed to equal the capacity of one pump (Lead/lag)

SECTION 5- PROJECT FEASABILITY STUDY (PFS)

5.3.3- Identified Issues - Ricardo Pump Station #1

5.3.3.1- General Issues

- > Deteriorated Mechanical Components: Most of the mechanical components are exposed to the atmosphere. Many valves and pipe connections are damaged and non-operational, requiring STWA operators to spend additional time coordinating daily maintenance.
- > Aging Rotary Equipment: Pumps and motors across the system are approaching or exceeding their service life, resulting in increased maintenance needs, operational disruptions, and rising service costs for STWA O&M.

5.3.3.2- Operational Issues

- > Chlorine Dosing Issues: Old dosing control panels and facilities have led to inconsistent chlorine dosing, affecting water quality compliance. (Currently the dosing system is inactive due to recent tank collapse)
- Water Loss from Leakage: Aging infrastructure has resulted in significant leaks at pumps, meter assemblies, and storage tanks. These leaks not only contribute to water loss but also lead to corrosion-related issues.
- > Generator: The existing diesel generators are not fit for long term run, life expired, fueling diesel tanks is not easy during emergency situations.

Design Based Issues

No design based issue has identified.

The existing conditions has inspected by ICE and verified by STWA for the future maintenance process, the images captured from the site to visualize the identified issues, and actual conditions were attached as Appendix A: Five Pump Stations - Site visit images. (Ricardo Pump Station#1 - Site visit images)

SECTION 5- PROJECT FEASABILITY STUDY (PFS)

5.3.4- Engineering Solutions (ES)

1) Replace all essential pumps, motors, storage tanks, and mechanical and electrical components to ensure at least 20 years of reliable operation for the pump station.

5.3.4.1- Proposed Final Design – Feed Pumps

· Based on daily demand data the existing pump capacity is sufficient to feed the costumers for next 20 Years.

Note: According to 30 TAC \$290.44(d)(4) (TCEQ, Chapter-290 subchapter - d, 2015), if 200 gallons per connection is available in elevated storage tank, the pump can be sized at 0.6 gpm per connection.

5.3.4.2- Proposed Final Design – Storage Tanks

> Replace the existing two Ground storage tanks with 15% increased storage capacity.

A detailed recommendation for each identified issue is provided in the Summary Table - Ricardo PS#1

5.3.5- Summary Table - Ricardo PS#1

The table below summarizes all the identified issues in details and Recommended engineering solutions.

| Issues | Recommendations |
|--|--|
| Ground storage tanks 1. The existing 2 storage tanks are heavily corroded and pin hole leak points observed. | Replace the existing storage with 15% increment to the total capacity |
| Elevated Storage Tank (EST) needs inspection 1. Lite external corrosion observed on the elevated tank. 2. Cathodic protection system is not active | Sandblast and re-coat the elevated storage tank system. Activate the cathodic protection system for the longer corrosion protection of system. |
| Pump Room 1. Pumps and motors exceeded their design life, corroded parts observed. a. Pump 1 - 500 gpm b. Pump 2 - 500 gpm 2. Back up pump is not active a. Pump 3 - 100 gpm – Hydro tank | Replace both the pump and motors (2 Numbers) Replace the non-active backup pump for future emergency requirements. |
| Water Inflow 1. The meter assembly valves and fittings affected corrosion. | Replace the meter assembly and necessary corroded appurtenances. |
| Ammonia room 1. The existing ammonia room is highly corroded 2. Back up ammonia pump | The room needs replacement to ensure the equipment inside is protected. Obtain additional standby pump. |
| Generator 1. The diesel generators are not fit for long term run, life expired, fueling diesel tanks is not easy during emergency situations. | Replace the diesel generator with a Propane fueled generator for long term reliable operation. A Section of the STIM 2025 Master Plan. A Section of the STIM 2025 Master Plan. |

Table 18. Final Summary of Identified Issues and Recommended Solutions ~ As Referenced in the STWA 2025 Master Plan.

5.4 - PFS: Ricardo Pump Station #2 - RWSC

Pump Station #2, similar in design and construction period to Ricardo Pump Station #1, plays a key role in supplying water to a large segment of Ricardo's population. Originally equipped with four ground storage tanks, the system lost one due to structural failure caused by prolonged internal and external damage. At present, water storage is managed using the remaining three ground tanks along with an elevated storage tank.

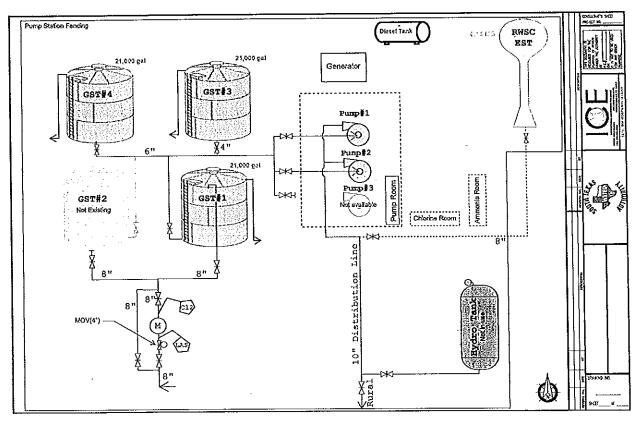

Figure 27. Ricardo PS#2 - Existing Pump Station Layout.

5.4.1- Existing Asset Details – Ricardo Pump Station #2

| Assets | Specifications | Remarks |
|------------------------|----------------|--------------------------|
| Feed Pump #1 | 500 gpm | Rural Distribution |
| Feed Pump #2 | 500 gpm | Rural Distribution |
| Ground Storage Tank #1 | 21000 Gallons | Active (Concrete) |
| Ground Storage Tank #2 | 21000 Gallons | Active (Concrete) |
| Ground Storage Tank #3 | 21000 Gallons | Active (Concrete) |
| Ground Storage Tank #4 | 21000 Gallons | Not existing (Ćollapsed) |
| Elevated Storage Tank | 0.15 MG | Rural Distribution |
| Hydro Tank | - | Not in service |
| Flow Meter | 4" | Main Meter (Inflow) |

Table 19, Asset Details-Ricardo PS#2

5.4.2- Existing Pump Room Design - Ricardo PS #2

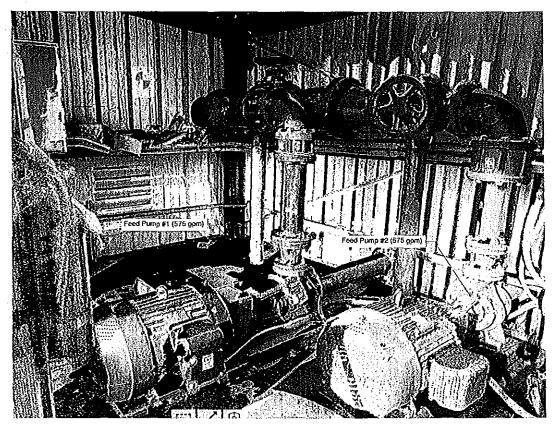

Figure 28. Internal View of the Ricardo pump station #2 pump room - Pump Connection Layout from ICE Survey 3D Scan, June 2025.

- Pump Sequencing (Lead-Lag) 1D+1S
 - Pump #1 (Lead) runs under normal demand
 - If demand increases, Pump #2(Lag) auto starts
 - Alternation Logic: rotates lead pump daily
 - Sizing Logic: Peak hour flow is designed to equal the capacity of one pump (Lead/lag)

SECTION 5- PROJECT FEASABILITY STUDY (PFS)

5.4.3- Identified Issues - Ricardo Pump Station #2

5.4.3.1- General Issues

- Deteriorated Mechanical Components: Most of the mechanical components are exposed to the atmosphere. Many valves and pipe connections are damaged and non-operational, requiring STWA operators to spend additional time coordinating daily maintenance.
- > Aging Rotary Equipment: Pumps and motors across the system are approaching or exceeding their service life, resulting in increased maintenance needs, operational disruptions, and rising service costs for STWA O&M.

5,4.3.2- Operational Issues

- ➤ Chlorine Dosing Issues: Old dosing control panels and facilities have led to inconsistent chlorine dosing, affecting water quality compliance. (Currently the dosing system is inactive due to recent tank collapse)
- > Water Loss from Leakage: Aging infrastructure has resulted in significant leaks at pumps, meter assemblies, and storage tanks. These leaks not only contribute to water loss but also lead to corrosion-related issues.
- > Generator: The existing diesel generators are not fit for long term run, life expired, fueling diesel tanks is not easy during emergency situations.

Design Based Issues

- > The current design includes four concrete storage tanks, which are already deteriorated. One of the tanks collapsed a long time ago.
- > The presence of multiple tanks and complex intake manifold connections has made operation and maintenance difficult.

The existing conditions has inspected by ICE and verified by STWA for the future maintenance process, the images captured from the site to visualize the identified issues, and actual conditions were attached as Appendix A: Five Pump Stations – Site visit images. (Ricardo Pump Station#2 – Site visit images)

5.4.4- Engineering Solutions (ES)

- Storage Tank Redesign: Modify the existing storage tank design by installing two metal storage tanks with a combined capacity equivalent to the original four concrete tanks. The new design should incorporate more reliable pump intake manifold connections and minimize the use of level sensors and complex control logic.
- 2. **Equipment Replacement**: Replace all critical pumps, motors, storage tanks, and associated mechanical and electrical components to ensure a minimum of 20 years of reliable operation for the pump station.

5.4.4.1- Proposed Final Design - Feed Pumps

 Based on daily demand data the existing pump capacity is sufficient to feed the costumers for next 20 Years.

Note: According to 30 TAC \$290.44(d)(4), if 200 gallons per connection is available in elevated storage tank, the pump can be sized at 0.6 gpm per connection.

5.4.4.2- Proposed Final Design - Storage Tanks

- > Remove the four existing storage tanks and replace them with two new large ground storage tanks.
- > The total storage capacity of the new tanks should include a 15% increase over the combined capacity of the existing tanks to accommodate future demand and operational flexibility.

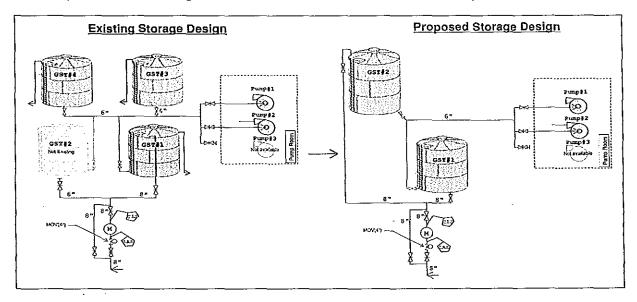

Figure 29. Proposed design change for Storage tanks.

A detailed recommendation for each identified issue is provided in the Summary Table - Ricardo PS#2

5.4.5- Summary Table - Ricardo PS#2

The table below summarizes all the identified issues in details and Recommended engineering solutions.

| Issues | Recommendations |
|--|---|
| Ground storage tanks | |
| The existing 3 storage tanks are heavily corroded, and leak points observed. The fourth tank is already collapsed and removed from the site | Replace the existing storage tanks with 2 larger storage tanks + 15% increment to the total capacity. |
| Elevated Storage Tank (EST) needs inspection | |
| Lite external corrosion observed on the elevated tank. Cathodic protection system is not active | Sandblast and re-coat the elevated storage tank system. Activate the cathodic protection system for the longer corrosion protection of system. |
| Pump Room | |
| Pumps and motors exceeded their design life, corroded parts observed. a. Pump 1 - 500 gpm b. Pump 2 - 500 gpm Back up pump is not in place. a. Pump 3 - 100 gpm - Hydro tank Water Inflow | Replace both the pump and motors (2 Numbers) Replace the backup pump for future emergency requirements. |
| The meter assembly valves and fittings affected corrosion. Pump suction lines are corroded and leakage observed | Replace the meter assembly and necessary corroded appurtenances. Re design all the external pipeline according to new storage tanks system design. |
| Ammonia room | |
| The existing ammonia room is highly corroded Back up ammonia pump | The room needs replacement to ensure the equipment inside is protected. Obtain additional standby pump. |
| Generator | , |
| The diesel generators are not fit for long term run, life expired, fueling diesel tanks is not easy during emergency situations. | Replace the diesel generator with a Propane fueled generator for long term reliable operation. |

Table 20. Final Summary of Identified Issues and Recommended Solutions - As Referenced in the STWA 2025 Master Plan.

5.5 - PFS: Ricardo Pump Station #3 - RWSC

Pump Station #3 was built in 1989 to meet the increased distribution pressure requirements on the north side of Ricardo and to serve the local community. Compared to Stations #1 and #2, it serves a smaller number of customers. Pressure balancing in this zone is still managed by a hydro tank, which provides the necessary pressure boost.

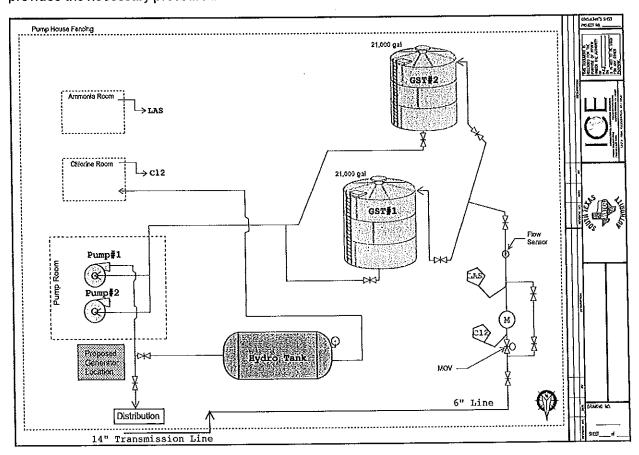

Figure 30. Ricardo PS#3 - Existing Pump Station Layout.

5.5.1- Existing Asset Details – Ricardo Pump Station #3

| Assets | Specifications | Remarks |
|------------------------|----------------|-----------------------|
| Feed Pump #1 | 110 gpm | Rural Distribution |
| Feed Pump #2 | 110 gpm | Rural Distribution |
| Ground Storage Tank #1 | 21000 Gallons | Active (Concrete) |
| Ground Storage Tank #2 | 21000 Gallons | Active (Concrete) |
| Hydro Tank | - | Active (Rural Supply) |
| Flow Meter | 4" | Main Meter (Inflow) |

Table 21. Asset Details-Ricardo PS#3.

5.5.2- Existing Pump Room Design – Ricardo PS #3

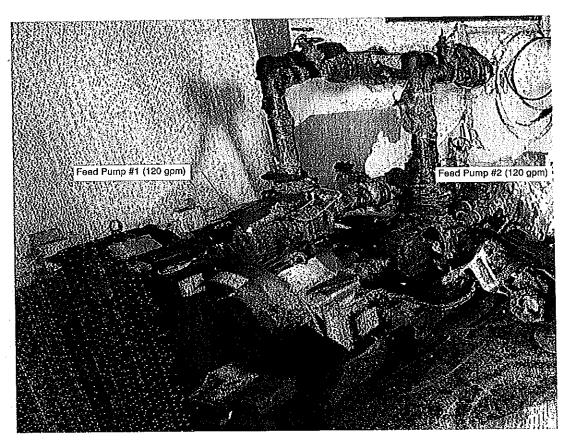

Figure 31. Internal View of the Ricardo pump station #3 pump room – Pump Connection Layout from ICE Survey 3D Scan, June 2025.

- Pump Sequencing (Lead-Lag) 1D+1S
 - Pump #1 (Lead) runs under normal demand
 - If demand increases, Pump #2(Lag) auto starts
 - Alternation Logic: rotates lead pump daily
 - Sizing Logic: Peak hour flow is designed to equal the capacity of one pump (Lead/lag)

5.5.3- Identified Issues - Ricardo Pump Station #3

5.5.3.1- General Issues

- > Deteriorated Mechanical Components: Most of the mechanical components are exposed to the atmosphere. Many valves and pipe connections are damaged and non-operational, requiring STWA operators to spend additional time coordinating daily maintenance.
- Aging Rotary Equipment: Pumps and motors across the system are approaching or exceeding their service life, resulting in increased maintenance needs, operational disruptions, and rising service costs for STWA O&M.
- > Damaged Pump House Structure: The pump house is constructed of wood and has suffered extensive damage. Most parts are beyond repair and require complete replacement.

5.5.3.2- Operational Issues

- > Chlorine Dosing Issues: Old dosing control panels and facilities have led to inconsistent chlorine dosing, affecting water quality compliance. (Currently the dosing system is inactive due to recent tank collapse)
- Water Loss from Leakage: Aging infrastructure has resulted in significant leaks at pumps, meter assemblies, and storage tanks. These leaks not only contribute to water loss but also lead to corrosion-related issues.
- > Generator Requirement: There is no backup generator to support emergency water supply.

Design Based Issues

- > According to TCEQ design standards, the current pump capacity is inadequate to serve 97 connections.
- According to TCEQ design standards, the current storage capacity is inadequate to serve 97 connections

The existing conditions has inspected by ICE and verified by STWA for the future maintenance process, the images captured from the site to visualize the identified issues, and actual conditions were

SECTION 5- PROJECT FEASABILITY STUDY (PFS)

attached as Appendix A: Five Pump Stations - Site visit images. (Ricardo Pump Station#3 - Site visit images)

5.5.4- Engineering Solutions (ES)

1. Replace all essential pumps, motors, storage tanks, and mechanical and electrical components to ensure at least 20 years of reliable operation for the pump station.

5.5.4.2- Proposed Final Design - Feed Pumps

Replace all two existing pumps with new pumps, each rated at least 194 gallons per minute (gpm).

5.5.4.3- Proposed Final Design – Storage Tanks

> Replace the existing 2 tanks with 25,000 gallons capacity (15% Increment to Existing System)

A detailed recommendation for each identified issue is provided in the Summary Table- Ricardo PS#3

5.5.5- Summary Table- Ricardo PS#3

The table below summarizes all the identified issues in details and Recommended engineering solutions.

| Issues | Recommendations |
|--|---|
| Ground storage tanks 1. The existing 2 storage tanks are expired their life, high chance of failure. | Replace the existing storage tanks with 2 new storage tank (15% Increment to the total capacity. |
| Pump Room 1. Pumps and motors exceeded their design life, corroded parts observed. a. Pump 1 - 120 gpm b. Pump 2 - 120 gpm 2. The pump room is heavily damaged, all the electrical and control panel connections are directly mounted on the room wall | Replace both the pump and motors (2 Numbers) Remove the pump house and install new pump house account re installing all electrical and electronic parts replaced properly. |
| Water Inflow 1. The meter assembly valves and fittings affected corrosion. 2. Pump suction lines are corroded and leakage observed | Replace the meter assembly and necessary corroded appurtenances. Re design all the external pipelines according to the new storage tanks system design. |
| Ammonia room 1. The existing ammonia room is highly corroded 2. Back up ammonia pump Generator | The room needs replacement to ensure the equipment inside is protected. Obtain additional standby pump. |
| There is no backup generator to support emergency water supply. | Install a Propane fueled generator for long term reliable operation. |

Table 22. Final Summary of Identified Issues and Recommended Solutions – As Referenced in the STWA 2025 Master Plan.

5.6 - "Section 5" Project Feasibility Study Summary

Design Basis

- Proposed values for storage pumps and tanks are based on:
 - o TCEQ Chapter 209.45, 44 (TCEQ, Chapter- 290 subchapter d, 2015)
 - AWWA Design Standards (Kammereck, 2016)
- These are preliminary calculations and will be verified during final design using hydrology modeling.
- Purpose: To confirm the capacity of the proposed pump flow rates and tank volumes.

Design Flexibility

- If final design shows incompatibility with the existing infrastructure, adjustments will be made as needed.
- All modifications will follow sound engineering principles.

Special Considerations

Central Pump Station (West Side System)

- This system serves four other pump stations.
- Not subject to regular TCEQ distribution standards
- Evaluation based on:
 - Historical water demand from STWA flow meter data.

Future Development Planning (Central West Side)

- Design accounts for potential industrial development by the end of 2028.
- A provision for one additional pump will be included:
 - o It can be installed with rehab plan and activated when required.

Transmission Line Condition

- The existing asbestos transmission line from the Central station to Agua Dulce will be carefully assessed.
- Any required design modifications will consider the condition and limitations of this pipeline.

Water Supply and Development Contract – Jose Rolando Flores

Memo

To: Ricardo Water Supply Corporation Board of Directors

From: John Marez, General Manager

Date: August 21, 2025

Re: Water Supply and Development Contract – Jose Rolando Flores – Dulce Estates Subdivision

Background:

Jose Rolando Flores contacted the Corporation requesting that water service be provided for the Dulce Estates Subdivision. Mr. Flores has met Kleberg County subdivision requirements and has paid the prorata share of the improvements to the Corporation's water system to provide service for subdivision Phase II prior to this board meeting.

The property in the Dulce Estates Subdivision (attached in the metes and bounds) is for 18 connections located on CR 2140 and Victoria Trails.

It is in the Corporation's best interest to enter into this Development Contract. Application attached.

Analysis:

Developers creating subdivisions, or any property, should be deliberate with their planning and follow the corporation's procedures as regulated by TCEQ and verified by engineering. This ensures there is adequate water capacity available for the development.

Staff Recommendation:

Accept the Water Supply and Development Contract with Jose Rolando Flores upon verification his developer's contribution has cleared the bank and been paid to the corporation.

Board Action:

Authorize the General Manager or designee to execute a Water Supply and Development Contract with Jose Rolando Flores, for the Dulce Estates Subdivision

Summary:

The Flores (Dulce Estates) subdivision meets all criteria to be accepted into the corporation's water system. Adding more users into RWSC allows for the corporation to grow and meet the expanding need for property with water access in the county.

WATER SUPPLY AND DEVELOPMENT CONTRACT

THE STATE OF TEXAS

Ş

COUNTY OF KLEBERG

RG §

THIS CONTRACT, is between the Ricardo Water Supply Corporation, A Texas non-profit corporation, (hereinafter called RWSC) and **Jose Rolando Flores** (hereinafter called Developer).

WITNESSETH:

WHEREAS, RWSC has a contract with South Texas Water Authority, a governmental agency, conservation and reclamation district and body politic and corporate, to obtain water for supply to areas which lie outside of the jurisdictional limits of the other existing incorporated cities, water districts, or other municipal corporations which lie within the boundaries of South Texas Water Authority; and

WHEREAS, the South Texas Water Authority has an agreement dated October 14, 1980, with the City of Corpus Christi to obtain treated water from the City of Corpus Christi which gives the South Texas Water Authority the capacity to serve customers lying within the established boundaries of the South Texas Water Authority; and

WHEREAS, both RWSC and Developer recognize the terms of this contract are subject to all the terms and conditions of the contract between the City of Corpus Christi and South Texas Water Authority as well as the contract between South Texas Water Authority and RWSC, and incorporate the terms of each of said contracts by reference into the instant contract; and

WHEREAS, Developer desires to obtain a commitment from RWSC to supply water to a subdivision, as hereinafter described, which Developer has platted; and RWSC desires to supply water to such subdivision under the terms and conditions as hereinafter stated.

NOW, THEREFORE, in consideration of the mutual covenants and agreements herein contained, RWSC agrees to supply water under the terms and conditions and for the considerations hereinafter set forth, to-wit:

- From and after the effective date of this agreement specified in paragraph 5 below, Developer shall
 have the right to have water supplied to Developer's subdivision by RWSC in Kleberg County,
 Texas at a point described and depicted in Exhibit A, attached hereto and incorporated herein by
 reference.
- 2. Water provided by RWSC shall be exclusively used within the service area described in Exhibit B, referred to above. Developer warrants and certifies that the described area within which said subdivision lies neither wholly nor partially within the jurisdictional area of an existing city, municipal corporation, water improvements district or water control and improvement district which have a prior right to supply water to the subdivision, but are situated completely within the boundaries of South Texas Water Authority and within the area served by RWSC.

- 3. RWSC makes no guaranty that water will be available at any particular time or place; it being fully understood by both parties hereto that the ability of RWSC to supply water is subject to its contract with South Texas Water Authority which is subject to South Texas Water Authority's contract with the City of Corpus Christi for the supply of water, all terms of both agreements being herein incorporated by reference, and that this instrument is merely an agreement to allow withdrawal of water from the system operated by RWSC, when and if same is present and available.
- 4. As a precedent to RWSC having a duty to supply water to Developer's subdivision, Developer must:
 - (a) meet all flood plain, platting and subdivision requirements of the contract between the City of Corpus Christi and South Texas Water Authority and the contract between South Texas Water Authority and RWSC as well as local city, county, state or federal ordinances or laws and by the Federal Grant and Loan Agreements of which South Texas Water Authority and RWSC are subject as shall be specified by RWSC;
 - (b) make a deposit sufficient as determined solely by RWSC, to pay for the oversizing of the line(s) and/or increased pumping capacity necessary to service the subdivision as reasonably required when fully developed as platted; such deposit to be made prior to the servicing of said subdivision. Upon Developer having met all requirements, including payment for the increased capacity of the water system as stated hereinabove, RWSC shall have the duty to provide water to the subdivision to the extent of the increased capacity, as needed by the subdivision. If at the end of seven (7) years from the date water service first

became available to the subdivision, such increased capacity is not being fully utilized for service of the subdivision, from such time RWSC, South Texas Water Authority or the respective assigns of either, shall have the right to allocate the use of such excess capacity for other customers. Developer, during such seven (7) year period shall not be entitled to the exclusive use of such increased capacity unless or until all of the increased capacity is actually required in order to serve the subdivision or development.

- (c) submit for RWSC review and approval, all plans and specifications for water improvements within the development prior to construction. The Developer shall conform with all material and construction specifications of South Texas Water Authority and RWSC for water system improvements within the development prior to construction.
- (d) notify RWSC prior to the beginning of construction of the water distribution system within the subdivision so that RWSC may inspect the work in progress.
- (e) upon completion of construction of the water distribution system within the subdivision, submit as-built drawings and dedicate the water system improvements and an easement twenty feet (20') in width (or ten feet [10'] if the easement is adjacent to a public road or street) conforming to the outlines of the water distribution system as reflected by the said plat and as-built drawings, to RWSC or its assigns after final inspection and approval by an authorized representative of RWSC.
- 5. This agreement shall not be effective or binding on RWSC unless and until Developer has made all payments set forth in Exhibit C, and met all requirements of this Contract. Developer agrees that

he shall not represent to any person or entity that water service is available from RWSC until Developer has made all payments and satisfied all conditions set forth in this Contract."

- 6. Subject to Developer's duty to pay for the increased capacity of the line as stated hereinabove,

 RWSC will provide water service to the boundary line of the subdivision. Developer shall be

 financially responsible for the construction of the water distribution system within the subdivision.
- 7. RWSC will neither accept the dedication of the water system improvements nor provide water to the subdivision unless at the time of the dedication by Developer, Developer also submits to RWSC on forms supplied by RWSC, an affidavit executed by each contractor and subcontractor who has either supplied materials or labor to Developer for the construction, that contractor or subcontractor has been paid for the work performed, as well as an affidavit by Developer that Developer has paid for all work and materials supplied for the construction of the water system improvements.
- 8. Developer shall have no right to sell water to purchasers of lots within the subdivision and understands and agrees that each property owner within the subdivision will sign an individual water service contract with RWSC, or its assigns, before water service will be provided to the property owner desiring service.
- 9. Any expansion of the subdivision beyond the boundaries as shown by the plat attached hereto as

 Exhibit A will require that the Developer enter into a new water supply and development standards

 contract with RWSC, or its assigns, containing generally the same provisions as the instant

 contract.

- 10. RWSC reserves the right to designate the point at which Developer will have the right to tie into the RWSC water system.
- 11. In further consideration of RWSC's agreement to provide water to the boundary line of the subdivision, Developer warrants and covenants that:
 - a. Developer is the owner of record of the land described in the plat attached hereto as Exhibit
 A.
 - b. The name of the subdivision is Dulce Estates Subdivision, Phase II.
 - c. The entire land contained within the subdivision and for which Developer enters into this Water Supply and Development Contract is described on a subdivision plat attached hereto as Exhibit A.
 - d. The land contained within the subdivision is held by Developer under deed recorded in the Deed Records of the Kleberg County Clerk's office as follows: Volume 78, Page 634 and Volume 205, Page 998.
 - e. All taxes which are liens on the land at the date hereof have been paid.
 - f. There (are) (are not) any encumbrances or liens against the land. (Specify encumbrances, if any.)

- 12. Developer will indemnify and save RWSC harmless from any and all claims or demands whatsoever to which RWSC may be subjected by reason of any injury to any person or damage to any property resulting from or in any way connected with any and all actions and activities (or failure to act) of Developer under this contract. Developer shall be solely responsible for obtaining any permits or easements for the use of land owned by others, if necessary for the construction and installation of the water system improvements within the subdivision. However, nothing in this agreement shall be construed as authorizing Developer to obligate RWSC in any manner related to the installation and construction of any equipment, materials or water system improvements either within or without the subdivision. Developer further hereby releases RWSC and agrees to hold it harmless from any and all claims that Developer has or may have against RWSC for any reason whatever resulting from the agreement to use water obtained from RWSC, and RWSC makes no representation as to the quality of such water, other than it shall be potable.
- 13. No assignment of this agreement in whole or in part for any purpose shall be made or granted by Developer without the prior written consent of RWSC.
- 14. This contract may be changed or modified only with the written consent of Developer and the governing body of RWSC. Such modification may be requested by either party, but shall not in any event be effective until approved by the Board of Directors of RWSC.
- 15. This contract shall be subject to all valid rules, regulations and laws applicable hereto, past, or in the future, promulgated by the United States of America, the State of Texas, and any other

governing body or agency having lawful jurisdiction, or any authorized representative or agency of them.

- 16. If RWSC should be prevented, wholly or in part, from fulfilling its obligation to supply water to the boundary of the subdivision, by reason of any act of God, unavoidable accident, acts of enemy, strikes, fires, floods, conservation of water for those with superior and legal rights to such water, governmental restraint or regulation, or other causes of force majeure, or by reason of circumstances reasonable beyond its control, then the obligation of RWSC to deliver water to Developer's subdivision, as hereinabove provided, shall be temporarily suspended during continuation of such force majeure. No damage shall be recoverable by Developer from RWSC by reason of the temporary suspension of delivery of water due to any of the causes above mentioned. If RWSC's obligations shall be affected by any such causes, RWSC shall promptly notify Developer in writing, giving full particulars of such force majeure as soon as possible after the occurrence of the cause or causes relied upon.
- 17. It is agreed by the parties hereto that this instrument contains in writing all of the agreements between the parties hereto and nothing (except those things required by law) not incorporated herein or by reference shall be binding on the parties.

IN WITNESS WHEREOF, the parties hereto have caused this instrument to be executed in several counterparts, each a copy of which so executed shall be considered as an original by the respective duly authorized representatives, this the $\frac{25}{3}$ day of $\frac{1}{3}$ we $\frac{25}{3}$.
